Objectives

State Monad Example

Dr. Mattox Beckman

University of Illinois at Urbana-Champaign Department of Computer Science

| | Define | get | and | put |
|--|--------|-----|-----|-----|
|--|--------|-----|-----|-----|

▶ Write some stateful computations using the state monad.

| Introduction | Manipulating States | Get and Put | Introduction | Manipulating States | Get and Put |

| 0● | 00 | 00000 | 00 | •0 | 00000 |
| | | | | | / |

The Definition

Incrementing a State, 1

- ► State s a = State { runState :: s -> (a,s) }
- ▶ How can we write something that will increment the s component?

```
incState (State f) = ...
```

Introduction Manipulating States Get and Put Introduction Manipulating States Get and Put

Incrementing a State, 2

```
► State s a = State { runState :: s -> (a,s) }
 ▶ How can we write something that will increment the s component?
incState (State f) = State (\s -> let (x,s0) = f s in (x, s0+1))
or ...
rincState f = State (\s -> let (x,s0) = runState f s in (x, s0+1))
Sample run:
*Main> let e1 = State (\s -> (5,s))
*Main> incState (State f) = State (\s -> let (x,s0) = f s in (x,s0+1))
*Main> runState (incState e1) 0
(5,1)
```

Two Common Functions

► Two common functions:

```
iget :: State s s
2 \text{ get} = \text{State } (\s \rightarrow (s,s))
4 put :: a -> State a ()
_{5} put x = State (\s -> ((),x))
*Main> runState (State (\s -> (5,s)) >>= \v -> get) 8
(8,8)
*Main> runState (State (\s -> (5,s)) >>= put) 8
((),5)
```

Introduction

Manipulating States

Tracing Get

```
_1 (State (\s -> (5,s)) >>= \v -> get)
_{1}State (\s1 -> let (x,s2) = (\s -> (5,s)) s1
                    (y,s3) = runState ((\v -> get) x) s2
                 in (y,s3)
_{1}State (\s1 -> let (x,s2) = (5,s1)
                    (y,s3) = runState ((\v -> get) x) s2
                 in (y,s3)
State (\s1 -> let (y,s3) = runState ((\v -> get) 5) s1
                 in (y,s3)
_{1}State (\s1 -> (\s -> (s,s)) s1)
_1State (\s1 -> (s1,s1))
                                                        <ロ> <母> <母> <き> <き> <き> <き> の<0
```

Tracing Put

```
1 (State (\s -> (5,s)) >>= put)
1State (\s1 -> let (x,s2) = (\s -> (5,s)) s1
                   (y,s3) = runState (put x) s2
                in (y,s3)
_{1}State (\s1 -> let (x,s2) = (5,s1)
                   (y,s3) = runState (put x) s2
                in (y,s3)
State (\s1 -> let (y,s3) = runState (put 5) s1
                in (y,s3)
2
1State (\s1 -> (\s -> ((),5)) s1)
_{1}State (\s1 -> ((),5))
                                                     ◆□▶◆□▶◆□▶◆□▶ ■ り९℃
```

Using Do Notation

- ▶ Bind notation can be cumbersome.
- ▶ Do notation to the rescue!

Do Notation for States
