

Objectives

You should be able to ...

Shift-Reduce Conflicts

Dr. Mattox Beckman

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN
DEPARTMENT OF COMPUTER SCIENCE

- ▶ Explain the circumstances that cause a shift-reduce conflict.
- ▶ Use the presence of a shift-reduce conflict to detect ambiguity.
- ▶ Explain how a shift-reduce conflict could be fixed.
- ▶ Explain what an LR parser generator will do if the shift-reduce conflict is not fixed.

The Automata, Starting

- ▶ Let's build the table for this automata.
- ▶ Can you tell that it is ambiguous right now?

$$\begin{array}{l} S \rightarrow a E b \\ \quad | \quad x \\ E \rightarrow E x E \\ \quad | \quad b \end{array}$$

The Automata, Starting

- ▶ Let's build the table for this automata.
- ▶ Can you tell that it is ambiguous right now?
- ▶ Is $b \ x \ b \ x \ b$ to be parsed as $(b \ x \ b) \ x \ b$ or $b \ x \ (b \ x \ b)$?

$$\begin{array}{l} S \rightarrow a E b \\ \quad | \quad x \\ E \rightarrow E x E \\ \quad | \quad b \end{array}$$

Step 1

Step 1

 $I_0 \quad S \rightarrow \bullet a E b$
 $\bullet a b S$
 $I_0 \quad S \rightarrow \bullet a E b \Leftarrow$
 $\bullet a b S \Leftarrow$

Shift-Reduce Conflicts

$$l_5 \quad \begin{array}{l} E \rightarrow Ex \bullet E \\ E \rightarrow \bullet ExE \\ \bullet b \\ \hline \{x, b\} \quad r3 \end{array}$$

- ▶ The FIRST set of E says “shift.”
- ▶ The FOLLOW set of E says “reduce.”
- ▶ Fix this by changing precedence or associativity.
- ▶ What if you don’t fix this?

Shift-Reduce Conflicts

$$l_5 \quad \begin{array}{l} E \rightarrow Ex \bullet E \\ E \rightarrow \bullet ExE \\ \bullet b \\ \hline \{x, b\} \quad r3 \end{array}$$

- ▶ The FIRST set of E says “shift.”
- ▶ The FOLLOW set of E says “reduce.”
- ▶ Fix this by changing precedence or associativity.
- ▶ What if you don’t fix this?
- ▶ Consider the “dangling else” problem:
 $\text{if } x \text{ then if } y \text{ then } z \bullet \text{else } q$

Shift-Reduce Conflicts

$$l_5 \quad \begin{array}{l} E \rightarrow Ex \bullet E \\ E \rightarrow \bullet ExE \\ \bullet b \\ \hline \{x, b\} \quad r3 \end{array}$$

- ▶ The FIRST set of E says “shift.”
- ▶ The FOLLOW set of E says “reduce.”
- ▶ Fix this by changing precedence or associativity.
- ▶ What if you don’t fix this?
- ▶ Consider the “dangling else” problem:
 $\text{if } x \text{ then if } y \text{ then } z \bullet \text{else } q \text{ else } w$
