### Objectives

You should be able to ...

### **Loop Invariants**

Dr. Mattox Beckman

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN
DEPARTMENT OF COMPUTER SCIENCE

- Explain the concept of well formed induction.
- ▶ Enumerate the three conditions necessary for a loop to yield the correct answer.
- ▶ Enumerate the three conditions necessary for a loop to terminate.
- Pick a good loop invariant to verify a loop.

Loop Invariants

### What Is a Loop?

► Remember from our discussion of if that it is best to consider the if as one statement rather than two branches.

$$\frac{\{p \land B\}S_1\{q\} \qquad \{p \land \neg B\}S_2\{q\}}{\{p\} \text{if } B \text{ then } S_1 \text{ else } S_2 \text{ fi } \{q\}}$$

- ▶ With loops, we have a similar problem.
- ▶ ... *p* and *q* are the same thing, though!

### Loop Proof

► A loop proof outline looks like this:

$$\begin{cases} q \\ S_i \\ \{inv:p\} \ \{bd:t\} \end{cases}$$
 while  $B$  do 
$$\{p \land B\} \\ S \\ \{p\} \\ od \\ \{p \land \neg B\} \\ f_t \}$$

### **Loop Equations**

▶ We need to solve five equations.

{q}
S <sub>i</sub> {inv : p} {bd : t}
while $B$ do
$\{p \wedge B\}$
S
{ <i>p</i> }
od D)
$\{p \land \neg B\}$ $\{r\}$
f, l

Loops

- 1.  $\{q\}S_i\{p\}$
- 2.  $\{p \land B\}S\{p\}$
- 3.  $p \land \neg B \rightarrow r$
- 4.  $p \rightarrow t \ge 0$
- 5.  $\{p \land B \land t = z\}S\{t < z\}$

Loop Invariants

## Example 2 – Partial Correctness

#### Example 2

Introduction

Loop Equations

What are these equations?

- $ightharpoonup \{q\}S_i\{p\}$
- $\blacktriangleright$  { $p \land B$ }S{p}
- $ightharpoonup p \wedge \neg B \rightarrow r$

#### Solutions:

- ▶ No initialization!
- ightharpoonup  $gcd(a,b) = gcd(a',b') \land a = 0 \rightarrow b = gcd(a',b')$

### Example 1 - Partial Correctness

#### Example 1

$$s := 0;$$
  
 $i := 0;$   
while  $(i < |A|)$  do  
 $s := s + A[i];$   
 $i := i + 1$   
od

What are these equations?

- $ightharpoonup \{q\}S_i\{p\}$
- $\blacktriangleright$  { $p \land B$ }S{p}
- $ightharpoonup p \wedge \neg B \rightarrow r$

#### Solutions:

- ▶ {true }s := 0; i := 0{ $i \le |A| \land s = \sum_{i=1}^{i-1} A[i]$ }
- $\{i \le |A| \land s = \Sigma_0^{i-1} A[i] \land i < |A| \} S\{i \le |A| \land s = \Sigma_0^{i-1} A[i] \}$
- $i \leq |A| \wedge s = \Sigma_0^{i-1} A[i] \wedge i \geq |A| \rightarrow s = \Sigma_0^{|A|-1} A[i]$

### How to Pick a Loop Invariant

- ► The loop invariant is a weaker version of the postcondition.
- $ightharpoonup p \wedge \neg B \rightarrow r$
- ► The loop's job is to incrementally make *B* false.
- ► So, to pick a loop invariant, you need to weaken the postcondition.

#### Ways to Weaken

- ► Replace a constant with a range.
- Add a disjunct.
- ► Remove a conjunct.

Example 1

### Example 1

$$s = \prod_{j=0}^{|A|-1} A[j]$$

Replace a constant with a range:

$$0 \le n \le |A| \land r = \prod_{j=0}^{n-1} A[j]$$

 $s = \prod_{j=0}^{|A|-1} A[j]$ 

 $\mathsf{a} = 0 \land \mathsf{b} = \gcd(\mathsf{a}', \mathsf{b}');$

Example 2

### Example 2

$$a = 0 \wedge b = gcd(a', b');$$

Add a disjunct:

$$\mathsf{a} > 0 \land \mathsf{gcd}(\mathsf{a}, \mathsf{b}) = \mathsf{gcd}(\mathsf{a}', \mathsf{b}') \lor \mathsf{a} = 0 \land \mathsf{b} = \mathsf{gcd}(\mathsf{a}', \mathsf{b}');$$

 $|f(x)|<\varepsilon\wedge\delta<\varepsilon$ 

 $|f(x)|<\varepsilon\wedge\delta<\varepsilon$ 

 $|f(x)|<\varepsilon$

### Making Progress

- ▶ What does it mean to "make progress toward termination?"
- ► Consider a function on integers ...
- ► A function on lists ...
- A function on Hydras ...

### The Total Correctness Formulas

- $ightharpoonup p o t \geq 0$

### Example 1 – Total Correctness

### Example 1

$$s := 0;$$
  
 $i := 0;$   
while  $(i < |A|)$  do  
 $s := s + A[i];$   
 $i := i + 1$   
od

▶ Let t = |A| - i.

 $\blacktriangleright$   $i \leq |A| \land s = \Sigma_0^{i-1} A[i] \rightarrow t \geq 0$ 

Solution:

What are these equations?

- $ightharpoonup p o t \geq 0$

### Example 2 – Total Correctness

#### Example 2

What are these equations?

- $ightharpoonup p o t \geq 0$

#### Solutions:

- ightharpoonup  $a > 0 \rightarrow t \ge 0$
- ► (Too big to fit. But notice a always decreases!)
