# Loop Invariants

#### Dr. Mattox Beckman

University of Illinois at Urbana-Champaign Department of Computer Science

Introduction	Loops	Loop Equations	Loop Invariants	Termination
●	OO		0000	0000
Objectives				

- Explain the concept of well formed induction.
- Enumerate the three conditions necessary for a loop to yield the correct answer.

- Enumerate the three conditions necessary for a loop to terminate.
- Pick a good loop invariant to verify a loop.

Introduction	Loops	Loop Equations	Loop Invariants	Termination

What Is a Loop?

Remember from our discussion of if that it is best to consider the if as one statement rather than two branches.

$$\frac{\{p \land B\}S_1\{q\}}{\{p\}\texttt{if }B\texttt{ then }S_1\texttt{ else }S_2\texttt{f}\}}$$

・ロト・4日ト・モート・ヨーのへで

- ▶ With loops, we have a similar problem.
- ... p and q are the same thing, though!

## Loop Proof

► A loop proof outline looks like this:

$$\begin{array}{l} \{q\} \\ S_i \\ \{inv:p\} \ \{bd:t\} \\ \texttt{while } B \ \texttt{do} \\ \{p \land B\} \\ S \\ \{p\} \\ \texttt{od} \\ \{p \land \neg B\} \\ \{r\} \end{array}$$

## Loop Equations

We need to solve five equations.

$$\{q\} \\ S_i \\ \{inv : p\} \{bd : t\} \\ while B do \\ \{p \land B\} \\ S \\ \{p\} \\ od \\ \{p \land \neg B\} \\ \{r\}$$

1.  $\{q\}S_i\{p\}$ 2.  $\{p \land B\}S\{p\}$ 3.  $p \land \neg B \rightarrow r$ 4.  $p \rightarrow t \ge 0$ 5.  $\{p \land B \land t = z\}S\{t < z\}$

## Example 1 – Partial Correctness

Example 1

$$\begin{split} s &:= 0; \\ i &:= 0; \\ \texttt{while} \ (i < |\mathcal{A}|) \ \texttt{do} \\ s &:= s + \mathcal{A}[i]; \\ i &:= i + 1 \\ \texttt{od} \end{split}$$

What are these equations?

- $\blacktriangleright \{q\}S_i\{p\}$
- $\{p \land B\}S\{p\}$
- ▶  $p \land \neg B \to r$

Solutions:

- {true }s := 0; i := 0{i \le |A| \land s = \Sigma\_0^{i-1}A[i]}
- $\blacktriangleright \ \{i \le |\mathcal{A}| \land s = \Sigma_0^{i-1} \mathcal{A}[i] \land i < |\mathcal{A}|\} S\{i \le |\mathcal{A}| \land s = \Sigma_0^{i-1} \mathcal{A}[i]\}$
- $\blacktriangleright \ i \leq |\mathcal{A}| \wedge s = \Sigma_0^{i-1} \mathcal{A}[i] \wedge i \geq |\mathcal{A}| \rightarrow s = \Sigma_0^{|\mathcal{A}|-1} \mathcal{A}[i]$

#### Example 2 – Partial Correctness

#### Example 2

What are these equations?

- ► {q}S<sub>i</sub>{p}
- $\{p \land B\}S\{p\}$
- ▶  $p \land \neg B \rightarrow r$

while (a > 0) do  $a, b := b \mod a, a$ od

Solutions:

- No initialization!
- $\blacktriangleright \ \{\gcd(a,b) = \gcd(a',b') \land a > 0\} S\{\gcd(a,b) = \gcd(a',b')\}$
- $\blacktriangleright \ gcd(\mathbf{a}, \mathbf{b}) = gcd(\mathbf{a}', \mathbf{b}') \land \mathbf{a} = 0 \rightarrow \mathbf{b} = gcd(\mathbf{a}', \mathbf{b}')$

0	00	000	0000	0000

## How to Pick a Loop Invariant

- The loop invariant is a weaker version of the postcondition.
- ▶  $p \land \neg B \to r$
- ► The loop's job is to incrementally make *B* false.
- So, to pick a loop invariant, you need to weaken the postcondition.

#### Ways to Weaken

- Replace a constant with a range.
- Add a disjunct.
- Remove a conjunct.

Introduction	Loops	Loop Equations	Loop Invariants	Termination
0	00	000	0000	0000

$$s = \prod_{j=0}^{|\mathcal{A}|-1} \mathcal{A}[j]$$

Introduction	Loops	Loop Equations	Loop Invariants	Termination
0	00	000	0000	0000

$$s = \prod_{j=0}^{|\mathcal{A}|-1} \mathcal{A}[j]$$

Replace a constant with a range:

$$0 \le n \le |\mathcal{A}| \land r = \prod_{j=0}^{n-1} \mathcal{A}[j]$$

Introduction	Loops	Loop Equations	Loop Invariants	Termination
0	00	000	0000	0000

$$a = 0 \land b = gcd(a', b');$$

## Making Progress

- What does it mean to "make progress toward termination?"
- Consider a function on integers ...
- A function on lists ...
- ► A function on Hydras ...

### The Total Correctness Formulas

$$p \to t \ge 0$$

$$p \land B \land t = z S \{ t < z \}$$

・ロト・4回ト・4回ト・4回ト 回 のQで

Introduction	Loops	Loop Equations	Loop Invariants	Termination
0	00	000	0000	0000

## Example 1 – Total Correctness

Example 1

What are these equations?

- ▶  $p \rightarrow t \ge 0$
- $\blacktriangleright \{p \land B \land t = z\}S\{t < z\}$

$$\begin{split} s &:= 0; \\ i &:= 0; \\ \texttt{while} \ (i < |\mathcal{A}|) \ \texttt{do} \\ s &:= s + \mathcal{A}[i]; \\ i &:= i + 1 \\ \texttt{od} \end{split}$$

Solution:

- $\blacktriangleright \ i \le |\mathcal{A}| \land \mathbf{s} = \Sigma_0^{i-1} \mathcal{A}[i] \to t \ge 0$
- $\blacktriangleright \{i \le |\mathcal{A}| \land s = \Sigma_0^{i-1} \mathcal{A}[i] \land i < |\mathcal{A}| \land t = z\} S\{t < z\}$
- Let t = |A| i.

Introduction	Loops	Loop Equations	Loop Invariants	Termination
0	00	000	0000	0000

#### Example 2 – Total Correctness

#### Example 2

What are these equations?

- ▶  $p \rightarrow t \ge 0$
- $\blacktriangleright \{p \land B \land t = z\}S\{t < z\}$

while 
$$(a > 0)$$
 do  
 $a, b := b \mod a, a$   
od

Solutions:

- $\blacktriangleright a > 0 \rightarrow t \ge 0$
- (Too big to fit. But notice a always decreases!)
